
CBOX-203

ColdBox Modules

Course Overview

CBOX-203 is one of our advanced courses dealing with ColdBox Modules, Architecture and Modularization spread in 2 intense training days. In this course you will learn all about modular architecture, planning and the power behind ColdBox Modules. You will have both theory and hands on workshops that will sharpen your skills and challenge you.

Objectives

This course will challenge you on how to modularize your design and application architecture. ColdBox Modules are the building blocks of any extensible, scalable and sustainable application architecture. From small-scale web applications to RESTful web services and mission critical enterprise applications. This course will enhance your application toolbox and architectural skills.

- Understanding on modular architecture and design
- How to apply ColdBox Modules to your monolithic applications
- Everything you wanted to know about ColdBox Modules
- Knowledge of when to modularize and scale out your applications
- Understand key development best practices that will enable you to develop higher quality code

Target Audience

This training is designed for advanced developers who are already familiar with the ColdBox development platform.

Enrollment and Onsite Training
