CFConfig 1.0.0 Released

Brad Wood

Sep 18, 2018

We are proud to finally release version **1.0.0** of **CFConfig**. This library has been in development for nearly two years (20 months) and has had over 100 alpha releases!

CFConfig is already in use for production deploys, development setups and in the [Ortus Docker Image](#). CFConfig is a CLI tool built

upon a set of services that can manage the configuration of your Adobe, Lucee, and Railo servers so you never have to manually setup a server again.

CFConfig has been a huge effort and has received more pull requests than most of our projects for the time it has existed. ***A big shout out goes to the CFML Community for coming together to help make CFConfig a reality.*** We've had 12 contributors and over 30 pull requests! Contributors include:

- Brad Wood
- Ben Ferdinandus
- Mark Drew
- Joe Gooch

CFCONFIG

- John Berquist
- Gary Stanton
- Matthew Clemente
- Shane Austin
- Eric Peterson
- Israel Uргуiza
- Pete Freitag
- Tim Brown
- Andrew Davis

Installation

You can get the latest version of CFConfig like so:

```
install commandbox-cfconfig
```

We recommend using the latest version of CommandBox (4.2), but CFConfig is compatible with 3.6+.

Documentation

The docs for CFConfig can be found here:

<https://cfconfig.ortusbooks.com/>

Usage

Here's a quick overview of some of the things you can do with CFConfig. Check the docs link above for a full list.

Show settings on a server

```
cfconfig show
cfconfig show requestTimeout
```

Set server settings

```
cfconfig set adminPassword=myPass
cfconfig set requestTimeout=0,0,5,0
```

Export and Import settings to servers

```
cfconfig export .cfconfig.json
cfconfig import .cfconfig.json
```

Transfer config between servers

```
cfconfig transfer from=server1 to=server2
```

Diff configuration between two servers

```
cfconfig diff from=server1 to=server2
```
